Innovations - Spring 2015

GreenManager®

The water-saving crop management for use in orchards and vineyards

With the GreenManager it's possible to establish valuable greenings, for example a mixture of leguminous plants, to avoid water-stress for the plants during rainy periods. Under dry conditions the competition can be stopped immediately by greening, without risk of continuing loss of valuable soil moisture by intensive soil preparation. Erosion protection also remains.

Mediana Sowing-roller Face-Lifting

New for 2015: Remote unlocking of the „Frontschubbock“ from the driver's seat. Hydraulic folding can be upgraded at any time.

By the absence of frost the Guttler Mediana is an indispensable tool for the cultivation of sugar beets and corn.

From 1,5 m to 6 m applicable for front or rear use.

GreenMaster or GreenSeeder: The 5-in-1 system for pastureland and cultivation

For various applications all year round:

- > for pastureland maintenance - reseeding and new seeding
- > for crumbling and ventilation
- > perfect for intercropping
- > for combating the European corn borer

GreenMaster 640 / Matador - surprise winner in comparison test „Borer control“ of Top Agrar
