

The GreenSeeder family can be combined with a GÜTTLER® trailed roller at any time.

Optionally combinable with a GÜTTLER® Master ...

... or a GÜTTLER® Mayor

Valuable soil moisture is preserved

Control of the European corn borer with simultaneous sowing of a winter greening.

Cultivation of intercropping

## This saves working time and fuel

*I learn about the grassland care program from GÜTTLER® by chance at an agricultural machinery exhibition.*

*The demonstration I saw there already convinced me about the work quality. In just a single pass the machine carries out the the complete renewal of the grassland: harrow, sow and roll. This has also been proven in our practice. In just a single pass we harrow, in order to aerate the turf, place new grass seeds an then roll the whole area.*

Heinfried Sudmann is the manager of the Wiechring-Sudmann KG, Diepholz

## More milk from grass

*With the 7.5 m machine we therefore easily cover 4 ha/h at a speed of 10 -12 km/h. The machine leaves behind a first class work profile. What's more, with regular regeneration of the pasture we get measurably more milk out of the grass fodder.*

*In combination with our greening requirements, this year we want to till around 70 ha of greening with the GreenSeeder after the maize harvest, on a trial basis. Additionally we use the implement for combating the corn borer.*

# GreenSeeder

The GÜTTLER® system solution for your grassland care, sowing, renovation and new sowing. From 6.0 to 7.0 meters.

**The modular system makes you flexible**

The roller is connected by quick couplers.

**The harrow can be combined as required with a GÜTTLER® roller at any time**

Harrow alone

Roller alone

Harrowing, sowing and rolling in a single operation

**1** The shortest 4-row harrow in the market (with Ripperboard)

Options selectable between Ripperboard ...

... and leveling bar

**The shortest „4-row“ harrow of the world!!**  
The Ripperboard doubles the number of tines. Consequently an effect like a „4-row“ harrow occurs.

Even under adverse conditions the harrow can remove itself.

**2** Pneumatic sowing unit

**Pneumatic sowing unit**  
It distributes the seed exactly and close to the ground.

**Nurse crop (grass) in maize crop**  
One of many applications of the GreenSeeder.

**3** Quickly adjustable from smooth to aggressive

**Simple, central adjustment of the tines:**  
Adjust the entire harrow in a few steps.

**4** Optionally the GÜTTLER® roller ...

... ensures strong tillage, more sustainable turfs and higher yields!

... ensures the necessary soil contact of the seeds while reseeding.

**The rollers with the „Golden Hooves“**

Even our grandfathers knew it:

„The hoofprint of the grazing animals

- creates a denser sward
- brings the reseeding safely into the soil!“

Exactly from this hoofprint effect you benefit using the GÜTTLER® roller with its 305 prism tips per square meter!

**The rollers with the „Golden Hooves“**  
The Original. Since 1978
